DETAILED ACTION

Response to Arguments

Applicant's arguments with respect to claims 1, 3-10, 12-21 have been considered but are moot in view of the new restriction requirement.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1, 3, 4, 16 and 17, drawn to an auditory sense training method alternating between a region attenuated processed sound and original sound, classified in class 434, subclass 185.
- II. Claims 5-7, 18 and 19 drawn to an auditory sense training method having an amplitude attenuated processed sound and superimposed sound, classified in class 434, subclass 185.
- III. Claims 8-9 and 14-15, drawn to an auditory sense training method having phase reversed sound, classified in class 434, subclass 185.
- IV. Claims 10, 12, 13, 20 and 21, drawn to an auditory sense training method having an amplitude attenuated sound and original sound, classified in class 434, subclass 185.

The inventions are distinct, each from the other because of the following reasons:

Inventions I, II, III and IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different

Art Unit: 2644

modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different functions and different effects. Invention I is directed to alternating processed and original sound. This has a different function from invention II which is directed to a method which utilizes multiple channels, one channel having a processed sound and the other channel having the processed sound superimposed on the original sound. Invention III yet has a distinct function which has phase reversed sound alternated with the original sound. Lastly, invention IV is directed to alternating between an amplitude attenuated sound superimposed on the original sound and the original sound. Inventions II and IV have different functions and modes of operation because invention II requires two channels of sound.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Groups II, III and IV, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
